SIEMENS

We create **technology** to  
transform the everyday,  
for **everyone**

We create technology that the world needs – in  
**industry, infrastructure, mobility,  
and healthcare.**

These industries are the backbone of our economies –  
and for all of them, digitalization offers tremendous  
opportunities to become more competitive, more resilient,  
and more sustainable.

With our technologies, we empower our customers to  
accelerate their digital and sustainability transformations.

Together we're transforming the everyday, for everyone.

**Dr. Roland Busch**  
President and CEO of Siemens AG

# By combining the real and the digital worlds, Siemens empowers customers to accelerate their digital and sustainability transformation

We commute in cars designed with **Siemens software** ...

... built in factories running on **Siemens automation** ...

... and charged by a Siemens **smart grid**.

... that use energy  
with **maximum efficiency** ...

We work in smart buildings that  
**promote** our **health** and **safety**

...

... and connect the **physical**  
and the **digital** workplace.

We book our train tickets  
with **Siemens software** ...

... to travel on **trains  
made by Siemens** ...

... operated with Siemens  
**infrastructure technology.**

# Our Trade Compliance Technology **Journey**

## Tax Tech Lab US Example Projects

### Heavy Hitters

#### TradeXcelerate

Global trade management tool built in-house that stores Siemens' entry data, product classification, and allows communications between internal and external.

#### Reconciliation Management

Custom application to manage value / FTA reconciliation of imports crossing the US border. Application reduced manual work while allowing for processing of additional FTA claims, estimated return on investment of \$108k over three years.

#### Post-Entry Activity Management (PAM)

Risk management tool to standardize audits regardless of user, meet minimum identified review requirements, and help determine if post entry correction is needed.

### Business Continuity

### Daily Transformation

#### Validation: Entries not flagged for Value Recon

Leveraging the data from TradeXcelerate where entries with incorrect Value Recon flag can be caught before the 10-day mark.

#### Check Refund Process

Reporting coming out of accounting can be cumbersome to process and get the details out of. This alteryx process can take Excel report, and output clean report ready to go into PAM app to keep track of refunds received.

### Forward Looking

#### Datalake 2 Go (D2G)

Shifting of internal databases to the cloud for speed, scalability, and ease of access to our department. Central component in ensuring our department will have the data it needs on hand to do their daily work.

## Our Technology Journey

### Methods & Standards ~ 2015

- Tasked to standardize processes within our customs organization. E.g., varying processes across BU's.
- Responsible for centralizing all customs reporting within the organization.
- Developed first harmonized dashboards to manage customs KPI's across multiple BU's.

**Tech Tip:** PowerBI is a potential alternative to Tableau and is often readily available to you.

## Our Technology Journey Business Intelligence (BI)

- Our BI dashboards gave immense visibility and value to stakeholders.
- “Self-Service” aspect removed M&S being the roadblock for reporting.
- Data quality issues began to arise causing stakeholders to lose trust.
- Managing our data / updating our dashboards became very slow.

**Tech Tip:** Don't boil the ocean! Focus first on 2-3 KPI's as a starting point, then move on to others.

## Our Technology Journey

### Database Management

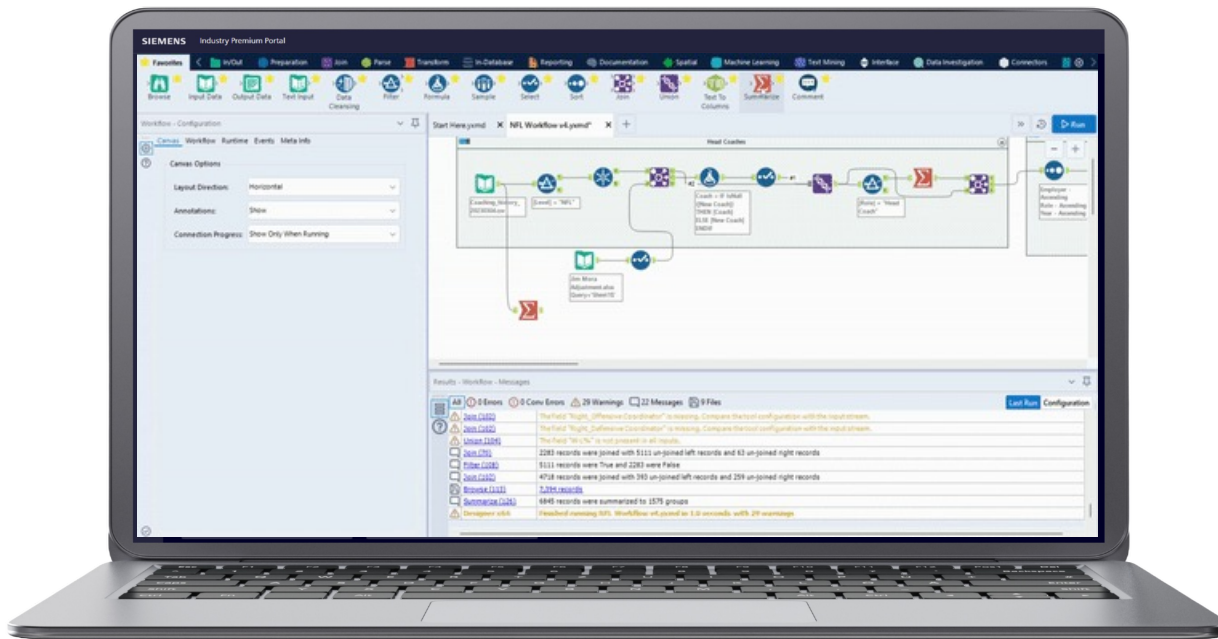

- We housed all our data in an Access database which would often freeze due to the size of our data.
- Eventually, we would upgrade to an on-premises Microsoft SQL server, greatly improving update speeds.
- However, data quality issues persisted, and feeding this database took an immense amount of time.

**Tech Tip:** Check with your IT department to see what database solutions are available.

## Our Technology Journey Extract, Transform, Load (ETL)

- We switched our ETL process from using complex SQL scripts to be workflow driven with Alteryx.
- Alteryx allowed us to automate our monthly update process from one week to one day.
- It's data cleansing tools allowed us to ensure the quality of our data across the board.

**Tech Tip:** Knime is a potential alternative to Alteryx. Tableau Prep can also now help in cleaning data.

## Our Technology Journey

### Analytics Process Automation (APA)

- Beyond automating our ETL processes, we discovered the value of Alteryx for further automations.
- For example: Automatically performing a statistical sample of our entries for internal audits.
- For example: Automatically correlating refund checks w/ entry data to submit to accounting.

**Tech Tip:** Look for highly manual processes that are done on a routine basis, e.g. generating weekly reports

## Our Technology Journey

### Tax Tech Lab (TTL) - 2020

- TTL was founded to holistically provide technology solutions / capability to our department.
- Focus shifted further towards “self-service”, i.e., how can we empower our employees.
- Larger projects undertook to develop full scale apps to manage processes like FTA Solicitation.

**Tech Tip:** Low-code tech like Alteryx / Tableau are excellent at extending a non-tech employee’s capabilities

# Our Technology Journey

## Building our “Tech-Stack”: Source Data

**Internal**  
ERP Systems, Global Trade  
Management Solution

**External**  
ACE, USITC

**Supplementary**  
• FX Rates, Market Data, Regulatory References

**Tech Tip: Follow the source – if possible connect to as close as possible to the original source.**

# Our Technology Journey

## Building our “Tech-Stack”: Cloud Harmonization

### Cloud Storage

Near real time data, extremely low storage cost, redundant backups

### Cloud Compute

Scalable power to run intensive processes  
*POC testing showed reduction in calc time from 40 hr's to 1*

### Data Catalog

Building trustworthiness in the data and simplifies use  
Self-service way for all employees to access data

**Tech Tip: Validate and clean your data before it reaches your database. And run tests frequently.**

# Our Technology Journey

## Building our “Tech-Stack”: Low Code Applications

### Low-Code Development

Ability to build custom applications without programming knowledge

### Connected Micro Ecosystem

Ability to leverage data across applications to improve efficiencies

### Scalable

Can upgrade storage or compute power with click of a button

**Tech Tip: Focus on user experience and the task at hand. Is the task necessary? Can it be automated or semi-automated?**

# Our Technology Journey

## Building our “Tech-Stack”: Self-Service Applications

**Data Visualization**  
Near real time dashboards to update key stakeholders

**Analytics Process Automation**  
Improving efficiencies through speed and reusability

**Imbedded Domain Knowhow**  
Built by tax personnel leveraging their knowledge

**Tech Tip: Empower your team by providing templates to start working with these tools.**

# Where should I **Start**?

## Where Should I Start?

### Learn From Our Mistakes

- Focus on your data first, ensuring it is not only clean but easily accessible and maintainable.
- Don't over customize. Keep it simple so that dashboards/databases are easy to maintain.
- Incorporate diverse testing methods: automated testing, peer reviews, and user testing to identify issues

**Tech Tip: Get feedback early often and early to pivot and adjust as necessary.**

## Where Should I Start?

### Identifying Processes for Automation

#### Monetary Perspective: (Requires Positive ROI)

- ↑ **High Volume**  
Processes which have many transactions or process itself occurs frequently
- ↓ **Low Variability**  
Process does not change often and is black and white, not shades of grey
- ↑ **High Intensity**  
Level of manual effort required to complete the process is high
- ↓ **Low Effort**  
Effort required to implement a technology solution to augment the process

#### Compliance Perspective: (ROI Not Relevant)

- Processes that are prone to human error
- Processes where data quality is an issue
- NEW processes required by new or changing regulations

## Where Should I Start? Getting Funding Support

- Calculate time saving by showing how often the process runs / how long it takes to run
- Keep in mind other gains such as data quality, accuracy, timely refresh, etc.
- If possible, track how many times new process is ran on a monthly or quarterly basis to calculate actual savings

**Tech Tip: Look for 1-2 key projects that can help you justify the cost of a tool like Alteryx.**

## Where Should I Start? When it's just me?

- What technology tools are available in your company that other groups are already using?
- Connect with other groups that may have similar goals and projects
- Collaborate with people in your team to define goals, identify pain points, and test.

**Tech Tip: Focus on 20% of the tasks that will yield 80% of the results (Pareto Principle).**

# Questions?
